

ServiceNow administration Script-Controlled ACL ? Restrict Record Access Based on Field Value

PHASE 6 - Project Testing Phase

Technology: ServiceNow - Flow Designer | Role/Project Area: ServiceNow Administrator

Phase Objective

Verify that the flow classifies incidents correctly and handles different test cases.

Test Case 1 - Matching Ticket

Create an incident that satisfies Classification Rule 1. Expected result: the flow runs and sets the expected classification.

Test Case 2 - Another Matching Ticket

Create an incident satisfying Classification Rule 2. Expected result: the second classification is applied correctly.

Test Case 3 - Non-Matching Ticket

Create an incident that does not satisfy any classification rule. Expected result: the flow does not apply an incorrect classification or follows the configured default behavior.

Execution Verification

Open the flow execution details after a test run and verify that the trigger and actions completed successfully.

Screenshot Evidence

The screenshot below is the single screenshot supplied for this submission.

Important: The supplied screenshot shows the ServiceNow Institution Details list. It is not a Flow Designer screen. For the final Auto Ticket Classification submission, replace it with a Flow Designer/Incident screenshot if your faculty requires project-specific evidence.

Screen Recording Required

2–3 minutes: demonstrate at least two test incidents and the flow execution result.

Submission Checklist

- Save this PDF in the matching Phase folder in the public GitHub repository.
- Keep the screenshot readable and make sure important ServiceNow fields are visible.
- Do not show passwords, credentials, API keys, or confidential information.
