

ServiceNow administration Script-Controlled ACL ? Restrict Record Access Based on Field Value

PHASE 8 - Project Demonstration Phase

Technology: ServiceNow - Flow Designer | Role/Project Area: ServiceNow Administrator

Phase Objective

Present the completed project clearly through a screen-recorded demonstration with voice-over.

Demo Introduction

Start by stating the project name: ServiceNow Administrator Auto Ticket Classification using Flow Designer.

Purpose

Explain that the project automates classification of incident tickets using configured Flow Designer rules.

Working Process

Show the Incident record, create or select a test incident, show the Flow Designer flow, demonstrate the trigger and classification logic, submit the incident, and show the updated classification.

Final Output

Show the final incident record and, if available, the successful flow execution details. Explain why the output matches the expected classification.

Submission

Upload the final demo video to Google Drive and make the link accessible according to faculty instructions. Add the public GitHub repository link to your project submission.

Screenshot Evidence

The screenshot below is the single screenshot supplied for this submission.

Important: The supplied screenshot shows the ServiceNow Institution Details list. It is not a Flow Designer screen. For the final Auto Ticket Classification submission, replace it with a Flow Designer/Incident screenshot if your faculty requires project-specific evidence.

Screen Recording Required

4-7 minutes: full final demo with project name, purpose, benefits, live execution, final output, and conclusion.

Submission Checklist

- Save this PDF in the matching Phase folder in the public GitHub repository.
- Keep the screenshot readable and make sure important ServiceNow fields are visible.
- Do not show passwords, credentials, API keys, or confidential information.
